# Tangrams

Make a square, using 1 to 7 pieces.

What squares are possible?

# Tangram Measurements

(inches and square inches)

<b>Pieces</b>	1	2	3	4	5	7
<b>Area</b>	2	2	4	8	8	16
<b>Side</b>	$\sqrt{2}$	$\sqrt{2}$	2	$2\sqrt{2}$	$2\sqrt{2}$	4

$$\sqrt{8} = 2\sqrt{2}$$

# A 6-piece square is impossible

- ◇ Total tangram area:  $16 \text{ in}^2$
- ◇ Individual pieces: 1, 2, or  $4 \text{ in}^2$
- ◇ 6-piece area: 15, 14, or  $12 \text{ in}^2$
- ◇ Side of 6-piece square?

# Convex Polygons

All “turn angles” turn in the same direction

yes

yes

All interior angles  $< 180^\circ$

no

What convex tangram  
n-gons are possible?

triangles, quadrilaterals, pentagons, ...?

# Exterior Angles

$$4 \times 90^\circ = 360^\circ$$

$$135^\circ + 135^\circ + 90^\circ = 360^\circ$$

(turn angles)

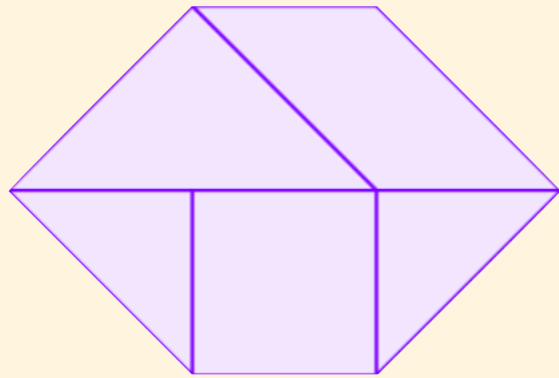

# A convex 9-gon is impossible (proof by zombie)

- ◇ All tangram angles are multiples of  $45^\circ$
- ◇ Greatest possible interior angle:  $135^\circ$
- ◇ Least possible exterior (turn) angle:  $45^\circ$
- ◇  $8 \times 45^\circ = 360^\circ$  so there cannot be 9 angles

5-gon? 6-gon? 7-gon? 8-gon?

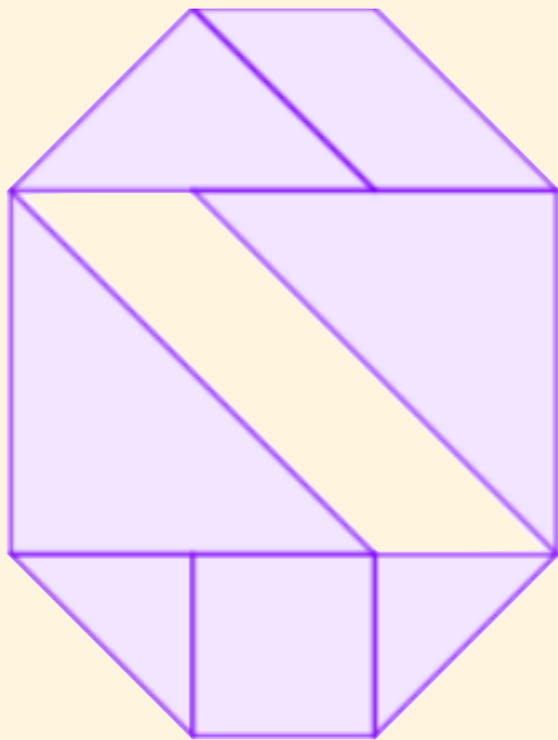

← convex 5-gon

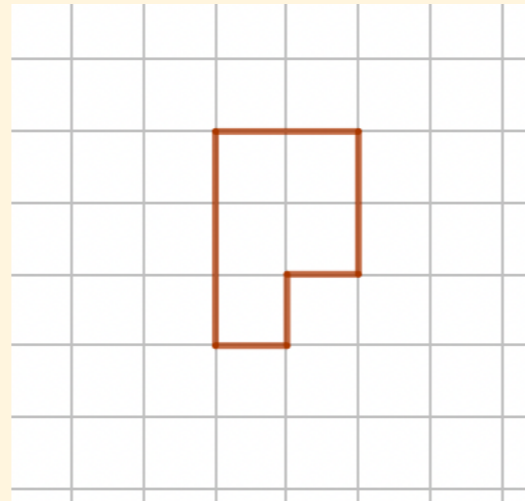

← convex 6-gon

← convex 7-gon

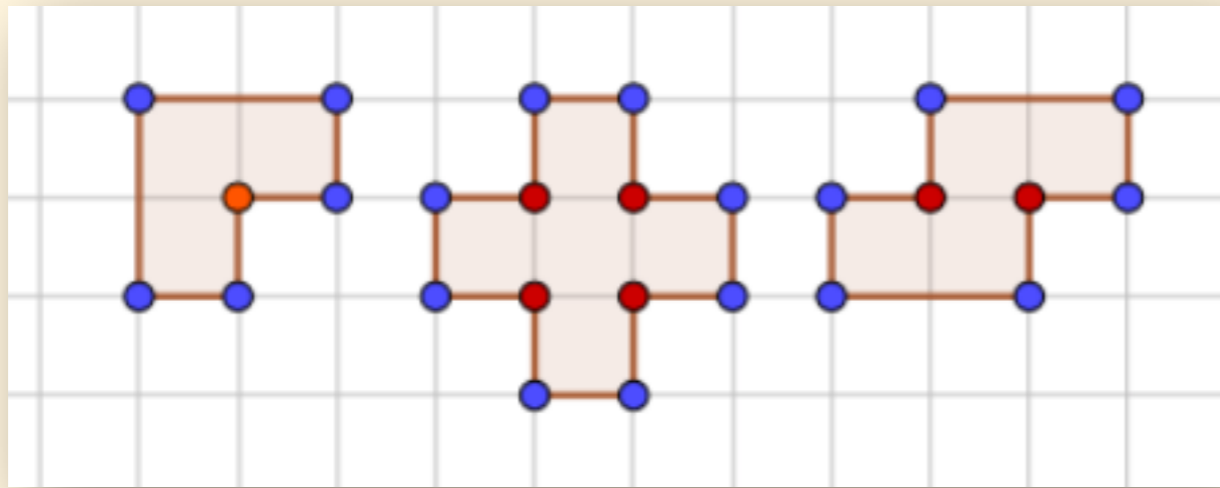

← convex 8-gon? 😞

# Polyominoes

(closed grid-paper figures:  
no diagonals, no crossings)

# In-corners and out-corners

in	out
1	5
4	8
2	6

What is the pattern?  
Why is it always true?

# Proof by zombie again!

Total turning:  $4 \times 90^\circ = 360^\circ$

Every additional right turn must be canceled by a left turn.

# Pentominoes

# Holes

# Three-piece pentomino puzzles

Layers  
(congruent figures)

# Generalizing

- ◇ What rectangles are possible?
- ◇ What “triangles” are possible?
- ◇ What *simultaneous* rectangles?
- ◇ ...triangles? combinations?

# Pentomino Blowups

double the dimensions  
(two cannot be solved)

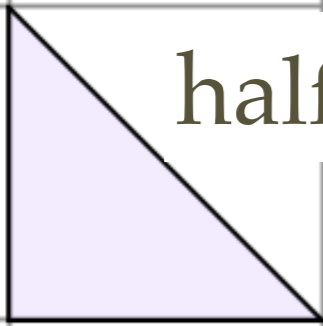

triple the dimensions

- ◇ When the dimensions are doubled, the area is multiplied by 4
- ◇ When the dimensions are tripled, the area is multiplied by 9

half-square

no!

supertangram = four half-squares,  
joined edge-to-edge

Find them all!

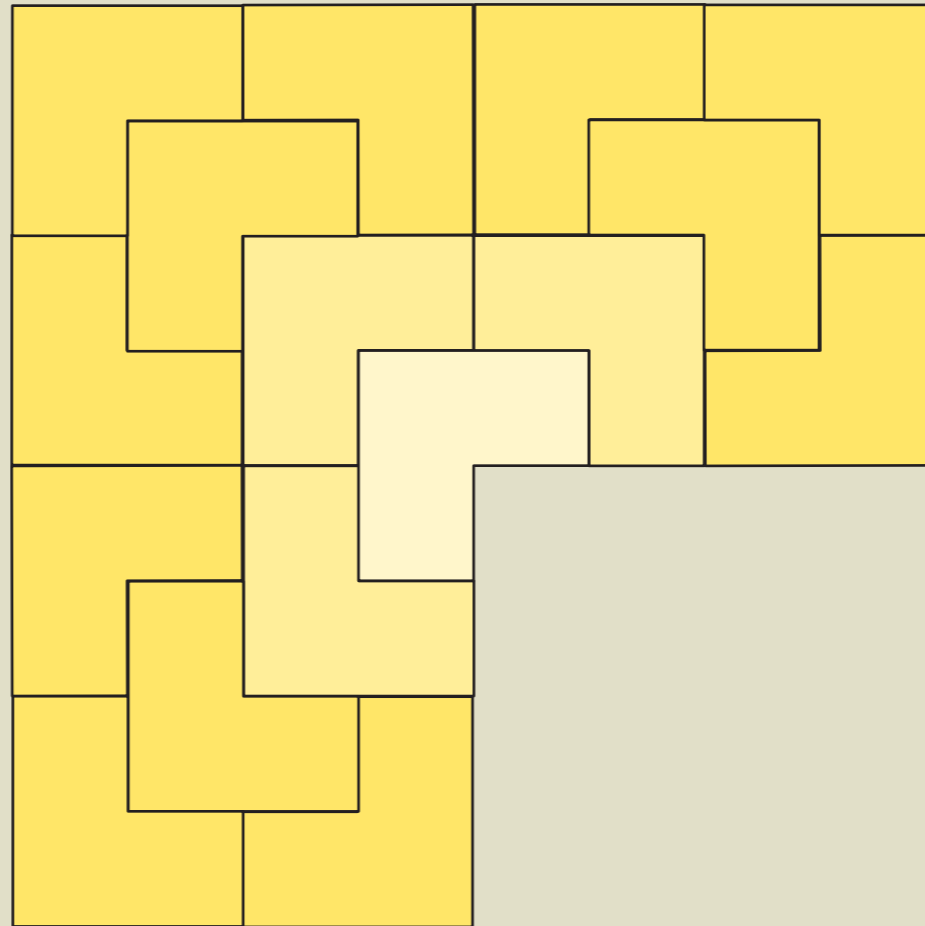

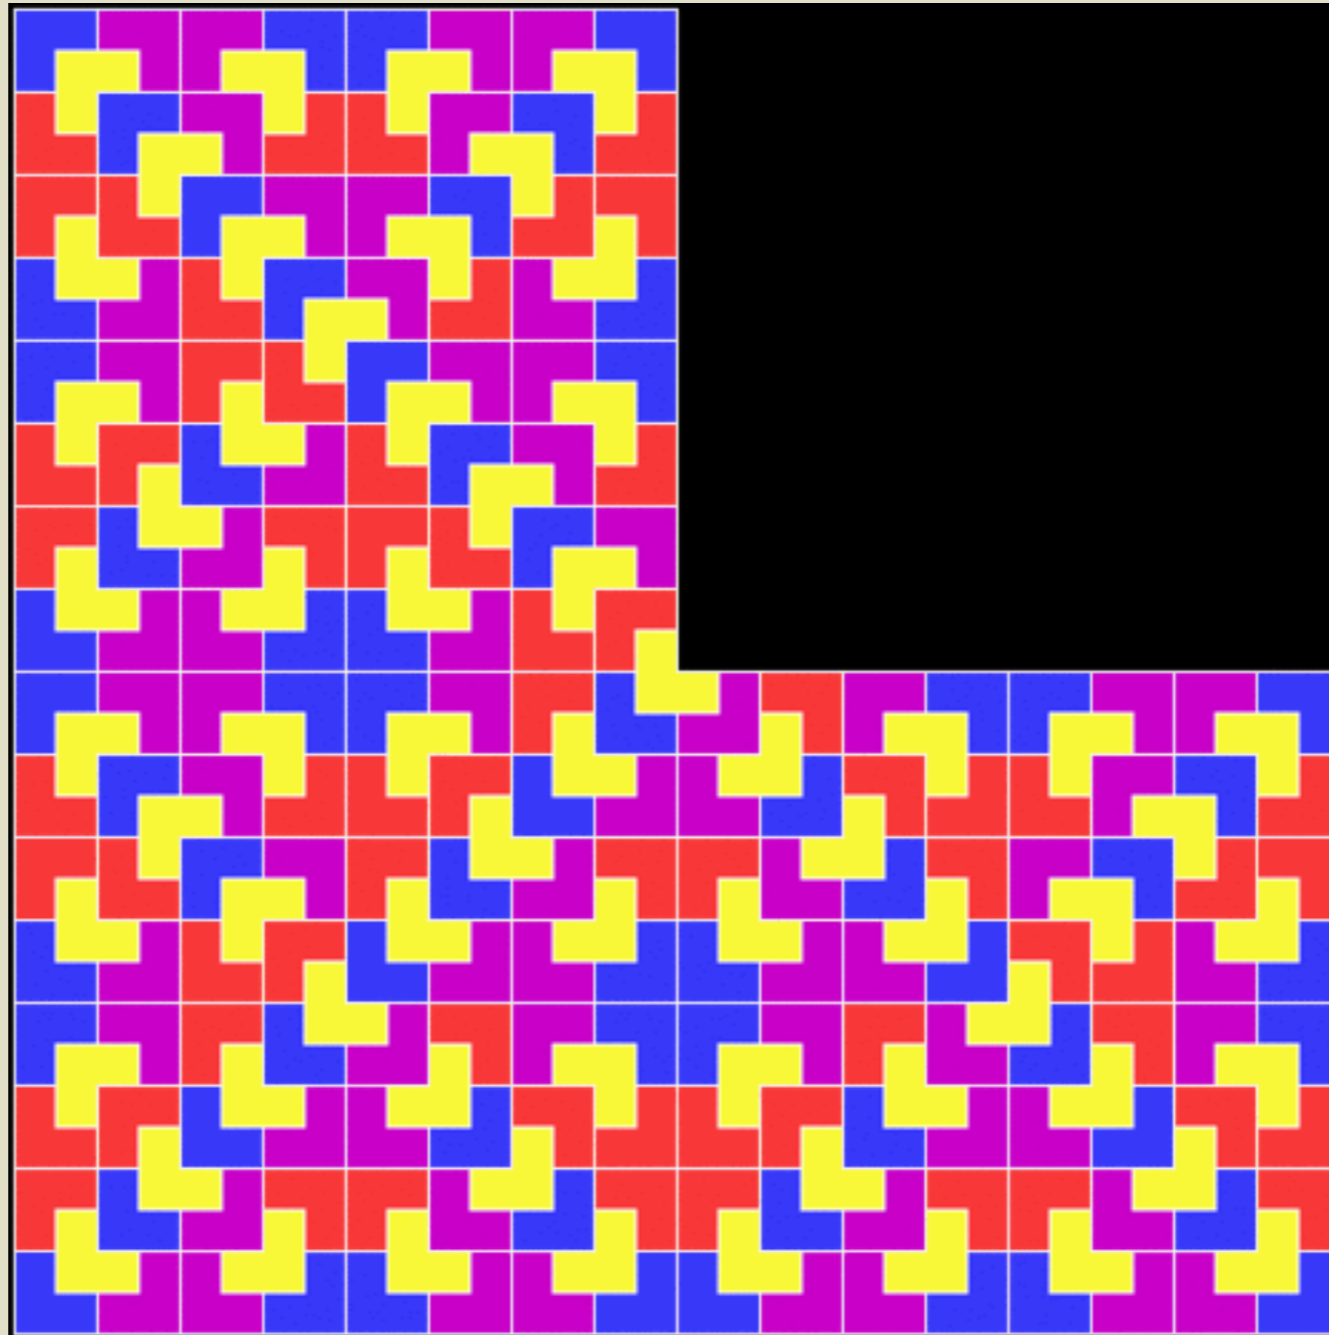

# Similarity

# Rep-tiles

Chair tiling

# Find some rep-tiles!

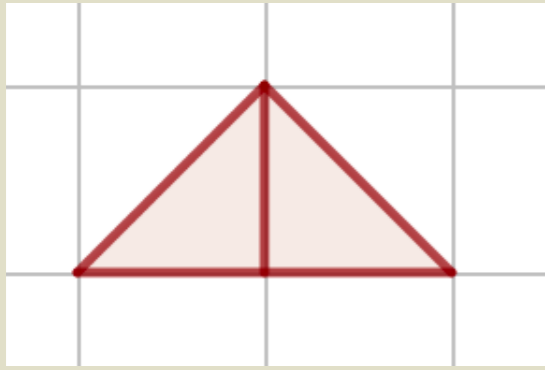

use the template, grid paper, and / or triangle paper

# Rep-Triangles

Find triangles that can be tiled with  
2, 3, 4, 5, ...  
scaled copies of themselves.

2

3

4

5

initial

Pinwheel tiling

Reminder:  
Lots of links in the “handout”  
on my **Talks** page.
